

GOING GREEN AT LYON

STORAGE SOLUTIONS.

LOCKER SOLUTIONS.

WORKSPACE SOLUTIONS.

Lyon is committed to developing products and programs that positively impact the environment. Whether the goal is creating a healthier environment, lowering operating costs, reducing emissions or maintaining an enviro-friendly product delivery system, Lyon is the clearcut leader in green initiatives within its industry:

- Lyon's new antimicrobial paint finish fights bacteria and mold growth around the clock on locker surfaces in public facilities like schools and hospitals
- 55% recycled steel content in Lyon products:
18% Pre-Consumer
37% Post-Consumer
- Lyon's energy-efficient powder coat finish on lockers eliminates VOCs – meaning the air is environmentally safer, and our 95%+ powder utilization efficiency is critical to lowering operating costs
- Lyon has adopted a 4-day work week in its manufacturing facilities to save energy and reduce employee work-related travel by 20%
- A new nylon tamper-resistant locker guide reduces noise pollution by eliminating metal-to-metal contact
- Lyon Engineers have developed a new patent-pending locker latching system that utilizes nano roller technology to greatly reduce the risk of locker break-ins. A nationally known testing organization has tested the new locking system to 40,000 cycles, which means it will last for decades
- Lyon's centrally located manufacturing facilities near Chicago are within 500 miles of many metro areas for fuel-efficient factory-direct truck deliveries to major markets throughout the Midwest and Midsouth
- Three outlying regional distribution centers bring Lyon products close to customers throughout the U.S. with inventory replenishments handled primarily via rail to lower costs and minimize fuel consumption

These green initiatives are significant and sustainable in the long term – as we continue to develop new environmentally-friendly initiatives for the future. Together we are saving precious natural resources by reusing costly steel.
