ANTIMICROBIAL LOCKERS

Antimicrobial steel lockers provide continuous, residual protection against the touch transfer of bacteria on the locker surface, as well as colonization of mold and bacteria in locker corners, seams and on hidden surfaces behind and under the locker.

How Does it Work?

Any moisture triggers the controlled release of powerful silver ions (see charts) to provide superior antimicrobial protection for decades. The antimicrobial compound is completely inorganic, less toxic than ordinary table salt, less irritating than talcum powder, and has been approved by the EPA, FDA and NSF for medical devices and food contact applications.

FEATURES

- Agion™ antimicrobial advanced powder technology
- 20+ years of antimicrobial protection
- Single and double tier openings
- 1-wide and 3-wide configurations

LOCKER SOLUTIONS.
