# ANTIMICROBIAL LOCKERS

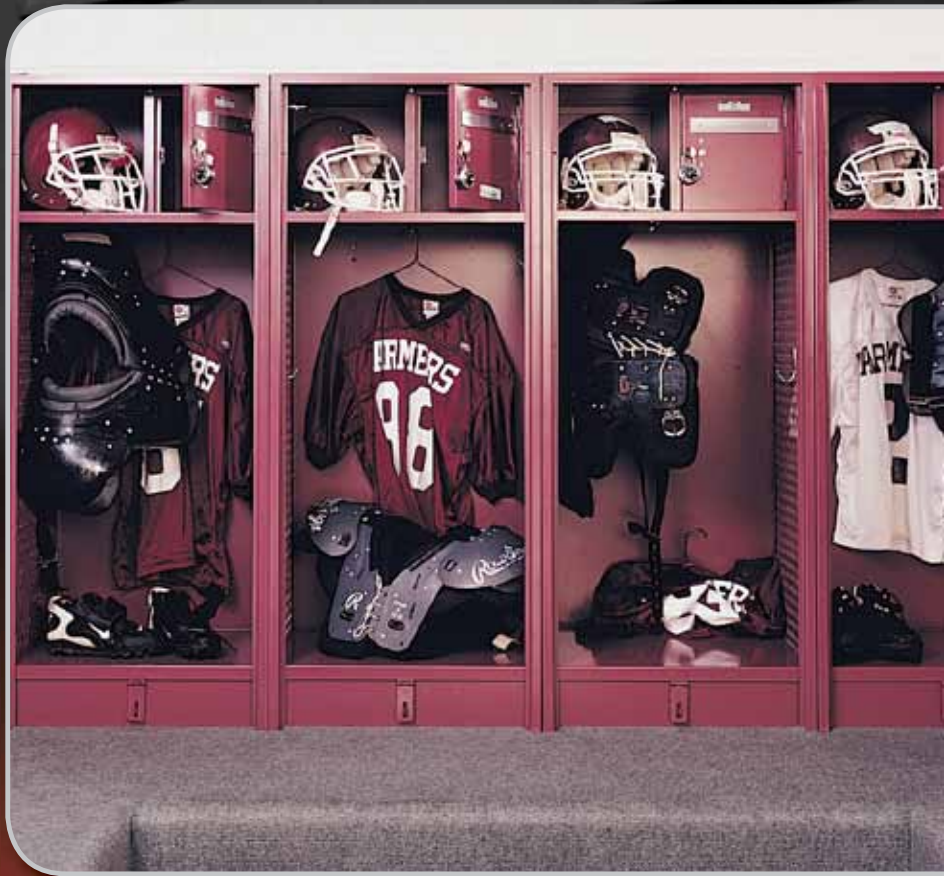

Antimicrobial steel lockers provide continuous, residual protection against the touch transfer of bacteria on the locker surface, as well as colonization of mold and bacteria in locker corners, seams and on hidden surfaces behind and under the locker.

### How Does it Work?

Any moisture triggers the controlled release of powerful silver ions (see charts) to provide superior antimicrobial protection for decades. The antimicrobial compound is completely inorganic, less toxic than ordinary table salt, less irritating than talcum powder.

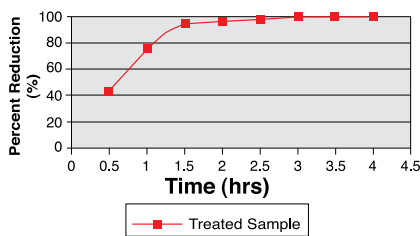

### FEATURES

- Agion™ antimicrobial advanced powder technology
- 20+ years of antimicrobial protection

### Antimicrobial Performance

% Reduction of Bacteria vs. Time

Tests conducted on epoxy coated stainless steel
