

IFAW. INTEGRATED FRAME, ALL WELDED LOCKER

Introducing the Ultimate Anti-Abuse, Anti-Vandalism IFAW™ Locker.

Whether it is a corridor or gymnasium application, the IFAW™ from is truly unique for its abuse and vandalism resistance. The IFAW™ was originally designed by Lyon in partnership with one of the country's largest school districts to eliminate conventional locker problems.

The IFAW™ is designed to pay for itself in additional years of trouble-free service – yet it costs about the same as a conventional all-welded locker.

FEATURES

- One piece, 14-gauge doors with box beam reinforcement
- Single piece top, bottom and back for each locker grouping (up to 3-wide)
- All seams and joints are MIG-welded on 6" centers
- Full length, piano-type hinges for positive door alignment
- 16-gauge body parts, 18-gauge backs
- 1" door thickness for added strength

Integral front frame is formed from the top, sides and bottom for incredible strength!

MIG-welded bottom channels for the most stable footprint available.

Choice of superior high security latching system: Single point latch with no moving parts or three point latch with nano roller technology.

Durable powder coat finish with optional anti-microbial properties that inhibit mold and bacterial growth on locker surfaces.
