LYON is UL GREENGUARD Certified!

Lyon stays committed to Going Green

AURORA – July 21, 2017 — Lyon LLC a leading manufacturer of Industrial Storage Products, is excited to announce that its Industrial Storage Products have earned UL GREENGUARD Gold Certification. This process demonstrates Lyon’s dedication to Going Green and to providing products that support safe and healthy indoor environments.

“Attaining GREENGUARD Gold Certification shows Lyon Group Holdings is serious about making a commitment to the environment at all three of our production facilities. We know this certification ensures that our products contribute to healthy indoor environments.”-John Altstadt, President Lyon Group Holdings

Recognized and referenced by over 400 codes, rating systems, and procurement policies worldwide, the GREENGUARD Certification requires that products meet some of the world’s most rigorous and comprehensive limits for low emissions of volatile organic compounds into indoor environments. The GREENGUARD Gold standard includes health based criteria for additional chemicals and also requires lower total VOC emissions levels to ensure that products are acceptable for use in environments such as schools and healthcare facilities.

To obtain this certification, LYON underwent extensive testing and audits conducted by UL Environment, one of the most renowned names in environmental testing and certification.
