

COMMAND GEAR LOCKERS

used by military pilots for flight gear

The Command Gear locker from Lyon offers a unique solution for the storage of military gear. The flight-related needs of pilots inspired the design of this all-welded locker.

The Command Gear features an open storage design. The main compartment is ideal for housing the torso harness, G-suit/ G-vest, survival vest and other related flying equipment. The open shelf above provides space for a flight helmet.

An upper storage compartment with a pull handle can hold personal items. The large lower compartment with recessed handle can hold additional equipment. Both storage doors can be secured with a built-in or user supplied lock.
