

MODULAR CABINET MEZZANINE

MAXIMIZE YOUR STORAGE FOOTPRINT

Mezzanines are a cost-effective way to essentially double your floor space without the need for building expansion. Cabinet-supported mezzanines are the go-to choice when you desire modular drawer storage both below and above the mezzanine.

These systems are designed to increase the density of modular drawer cabinets within the same footprint, resulting in superior space savings and organization. Stacking modular cabinets in a compact system like this dramatically reduces the space required for storage and minimizes the time needed to store and retrieve parts.

Lyon's fully modular MDC systems offer flexibility like no other. You can start with as few as six cabinets or go all-in with 600, and the configuration is entirely up to you. Whether you want to start small and add on gradually or make a big leap all at once, Lyon will be there to support you every step of the way.

A standard system begins with two rows of stacked modular drawer cabinets, stairs, handrails and a heavy-duty mat that is placed over the lower row of cabinets to create a walkway.

Eye-level cabinets are most commonly used on the lower floor-level. Overhead units can be added to second-level cabinets to create even more storage space.

Use stock cabinets for quick turnaround or customize with your company colors, specialty inserts or catwalk system, the choices are unlimited.
