

## PRODUCT UPDATE- STANDARD LOCKERS

---

Dear Valued Channel Partner:

Our goal at Lyon LLC is to be the most reliable, cost effective, and value added manufacturer of storage products for you, our channel partners. We are committed to finding new ways to provide you with the highest quality product, delivered on time while being the easiest supplier to work with. To that end, we will be announcing a number of new initiatives in 2019.

One of our first initiatives is focused on simplifying the production of our standard lockers which will help us better manage lead times and have fewer parts to manage in the field as is the case with the new intermediate bottoms. (See explanation below)

Effective with **new standard production lockers shipping after February 1, 2019, Lyon will be adding and changing some hole positions on the sides, backs, tops, bottoms, and shelves of the locker.** This will allow us to reduce the number of component sku's that we make, thus decreasing the number of setups and minimizing the complexity associated with scheduling.

**The impact of these changes** will be minimal from a functional perspective:

1. For those customers who order lockers with intermediate cross members on the double, triple, and four tier sizes, we have changed the intermediate bottoms to be the same as the top and bottoms of the locker. This means that you will not have separate boxes of intermediate bottoms to open and keep track of. Lyon will still offer lockers with or without intermediate cross members.
2. We are not changing any finished good part numbers for the standard stock products. So there is no need to change catalogs, online part numbers, or any other reference material.

**Forward and backward compatibility of this change:**

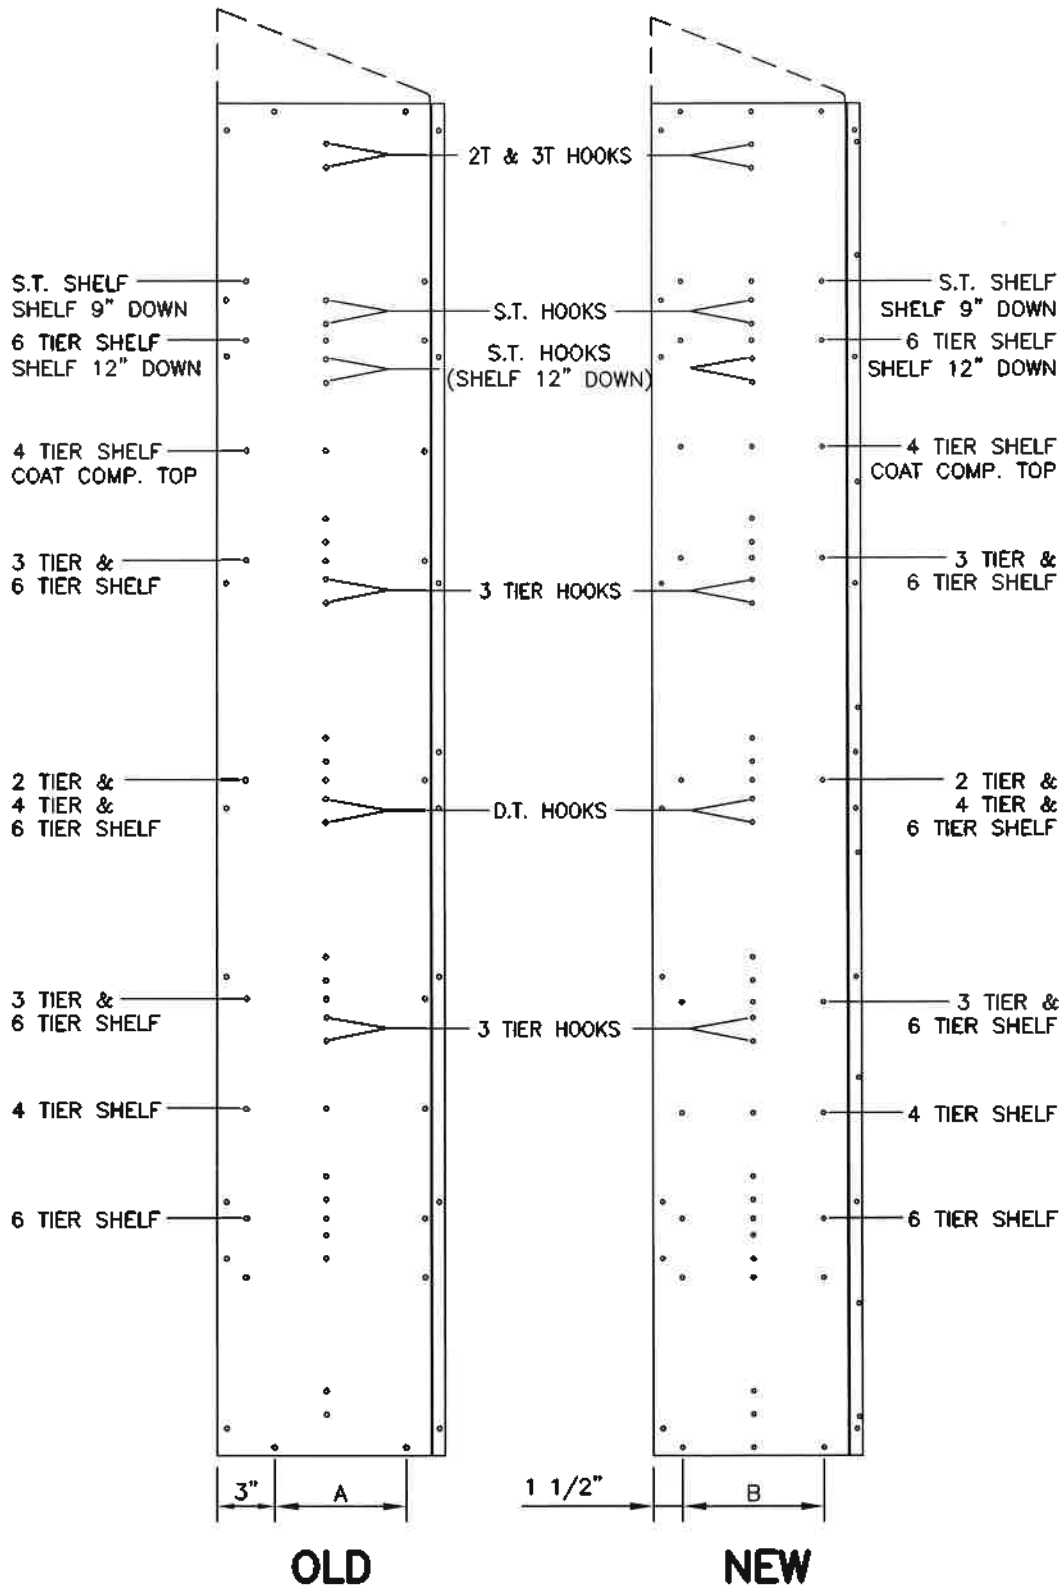

- This change is not backward compatible. That is, you will not be able to use the old sides, backs, tops, bottoms, or shelves on the new design unless you manually drill some holes.
- The change is partially forward compatible. That is, the new tops, bottoms, and intermediate bottoms can be used with the old locker design. However, the new side and back cannot be used on an old locker, again, unless you drill holes. We will still make the old style sides and backs for replacement parts.

**We will NOT be making these changes to our all welded or heavy-duty lockers at this time.**

**There will be no price changes associated with these changes.**

If you have further questions please contact your local Lyon representative or find us online at [www.lyonworkspace.com](http://www.lyonworkspace.com) .

# 72" SIDES

LOCKER DEPTH (INCHES)	A	B
12	6"	7 1/2"
15	9"	10 1/2"
18	12"	13 1/2"
21	15"	16 1/2"
24	18"	19 1/2"

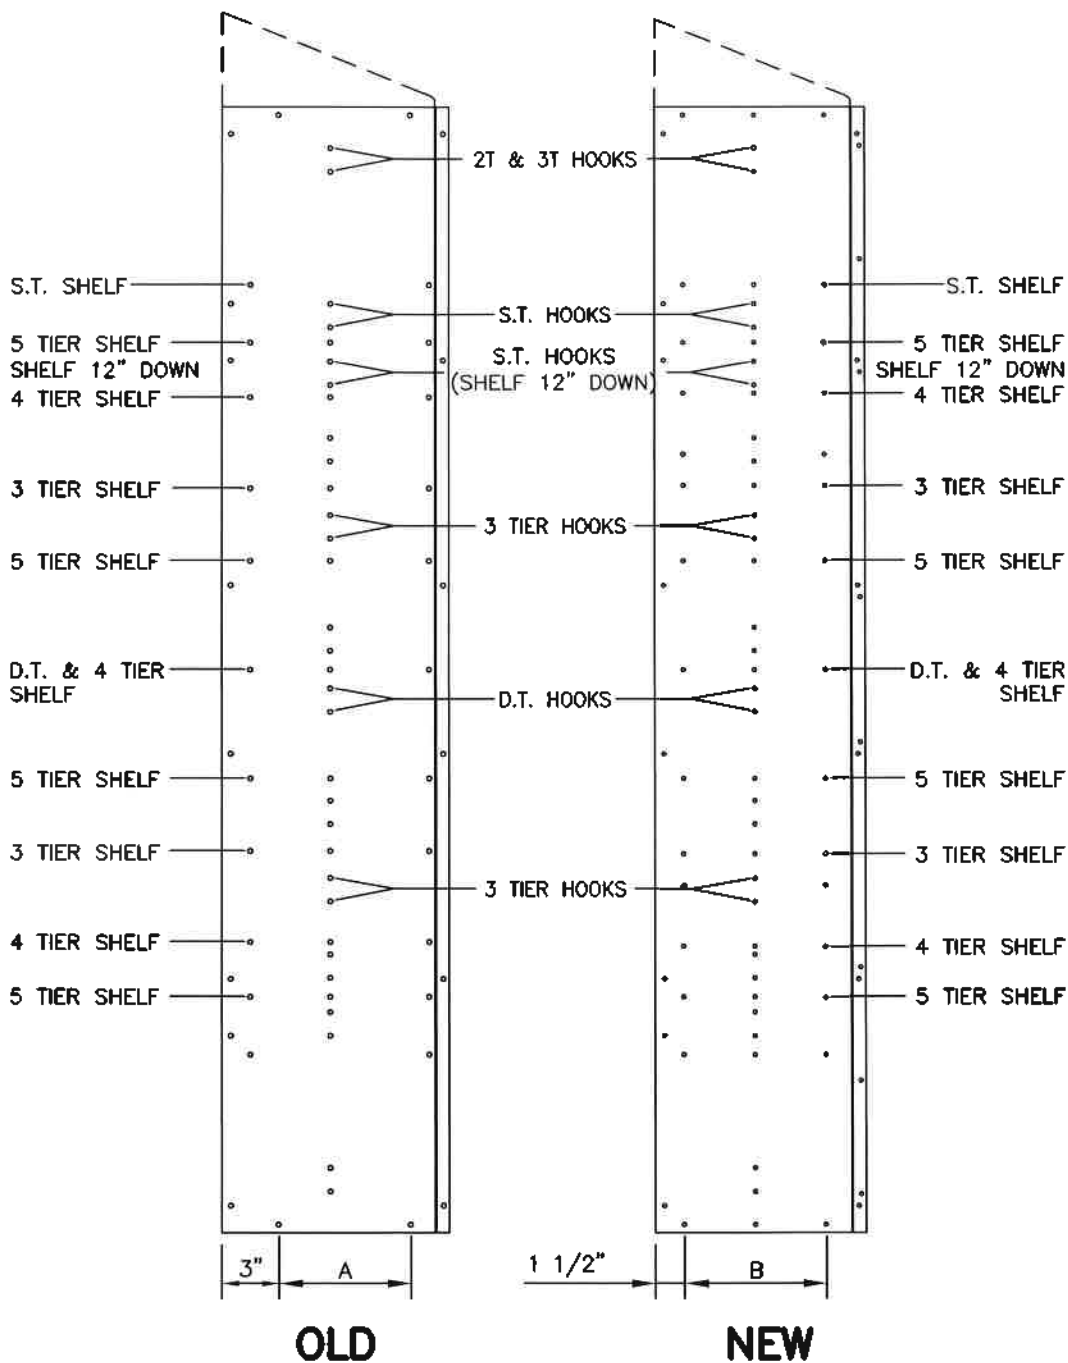

- 3 TIER AND 4 TIER PUNCHING WAS ADJUSTED VERTICALLY TO ACCOMMODATE ICM ON THE STANDARD SIDE
- TOP/BOTTOM AND SHELF PUNCHING HAS BEEN ALIGNED SO THERE IS A COMMON PUNCHING DIMENSION FOR TOPS, BOTTOMS, INTERMEDIATE BOTTOMS, AND SHELVES
